

Grape Master Website

1. Project Overview

Project Name: Grape Master Website (E-commerce)

Purpose:

To build and enhance an e-commerce website for selling grape-related products, with smooth checkout, multiple user roles, WhatsApp-based order communication, and scalable backend infrastructure.

Primary Goals:

- Enable customers to browse products and place orders easily
 - Integrate secure online payments (PhonePe + UPI)
 - Store and manage all order/user data in the database (not visible to users)
 - Automate WhatsApp order confirmation messages
 - Add dealer & distributor onboarding flow
-

2. Payment Gateway Requirements

2.1 PhonePe Payment Gateway Integration

- Integrate **PhonePe Payment Gateway** for online payments
- PhonePe should work alongside the **existing UPI payment method** (do NOT remove current UPI option)
- Payment options on checkout page:
 - UPI (existing)
 - PhonePe

2.2 Payment Flow

1. User places an order
 2. User selects payment method (UPI / PhonePe)
 3. Payment is processed securely
 4. On success/failure, system updates order status
 5. Order is saved in database
-

4. Database Requirements (Backend – Not Visible to User)

4.1 Database Creation

Create a proper database structure to store:

User Data:

- Name
- Mobile number
- Address
- City, State, Pincode

Order Data:

- Order ID (auto-generated)
 - User details (linked)
 - Product(s) ordered
 - Quantity
 - Price
 - Delivery charges
 - Total amount
 - Payment method
 - Payment status (Success / Failed / Pending)
 - Order status (Placed / Confirmed / Dispatched / Delivered)
 - Date & time
-

5. Delivery Charges Logic

- Delivery charges should be **dynamic & configurable from backend**
 - Developer must:
 - Centralize delivery charge logic
 - Ensure frontend reflects backend value correctly
-

6. WhatsApp Order Confirmation System

6.1 Customer WhatsApp Message

Automatically send WhatsApp message to the **customer** after successful order placement.

Message should include:

- Customer name
- Order ID
- Product details
- Total amount
- Payment method
- Order confirmation message

6.2 Admin WhatsApp Message

Automatically send WhatsApp message to the **admin** when a new order is placed.

Admin contact details:

- **Phone:** 9359516314
- **Email:** satyajitshinde2103@gmail.com

Admin message should include:

- Customer details
 - Order ID
 - Product & quantity
 - Total amount
 - Payment status
-

7. Dealer & Distributor Module

7.1 Option on Website

Add a option in navigation or footer:

"Be a Dealer / Distributor"

7.2 Dealer / Distributor Form

Create a separate form with following fields:

- Full Name
- Mobile Number
- Email ID

- City
- State
- Apartment Name
- Business Name
- Type (Dealer / Distributor)
- Distribution Capacity
- Experience (optional)
- Message / Notes

7.3 Form Submission Flow

- On submission:
 - Save details in database
 - Automatically share form details with admin via:
 - WhatsApp: **9359516314**
 - Email: **satyajitshinde2103@gmail.com**
-

8. Admin Requirements (Internal Use)

- Admin should receive:
 - All order notifications
 - All dealer/distributor enquiries
 - No admin panel UI required right now (optional for future)
-

9. Code & Development Guidelines

- Avoid hardcoding values (prices, delivery charges)
 - Write clean, scalable, and commented code
 - Ensure mobile responsiveness remains intact
-

10. Testing & Validation

Developer must test:

- Payment success & failure cases
- Order saving in database
- WhatsApp message delivery

- Delivery charge updates
 - Dealer/distributor form submission
-

11. Final Deliverables

- Fully functional updated website
 - PhonePe payment integration
 - Database integration
 - WhatsApp automation
 - Dealer/Distributor module
 - Bug-free delivery charge logic
-

Product Name | Weight | Rate

Flame: 2kg 450

Mix: 2kg 500

Green Sonakha: 2kg 400

Black jumbo: 2kg 550

Pomegranate: 2kg 500
